

2 Careful environmental considerations in all business activities

1. We address environmental conservation in all stages of our business activities, including research and development, product design, material procurement, manufacturing, logistics, sales, product use, product disposal, and recycling.

- We fully understand that environmental preservation is a pressing issue for the global community and an essential activity for corporate survival. We strive to carry out activities in accordance with the Casio Group Environmental Principles, Casio Group Biodiversity Guidelines, the Paper Procurement Policy, and the Procurement Policies.
- To help prevent global warming, we strive to reduce our emissions of greenhouse gases including carbon dioxide. To do this, we set medium and long-term reduction targets for these emissions and request our suppliers' cooperation to achieve them throughout the supply chain.
- Based on an understanding of the negative impact our business activities could cause on the global environment and biodiversity, we strive to curb waste by reducing, reusing and recycling, with the aim of zero landfill disposal. Moreover, we strive to live in harmony with nature through efficient use of water and other resources. This includes minimizing the use of plastics at all stages of the product creation process, and working to help realize a resource-recycling society.

2. We strive to develop innovative technologies, products and services that help solve environmental challenges.

- We manufacture products that are environmentally friendly, starting from the development and design stages all the way to recycling after product use. This includes efforts to make products lighter, more compact, longer life, and easier to recycle. Moreover, we create products with less environmental impact through the development and effective utilization of materials that can be naturally circulated.
